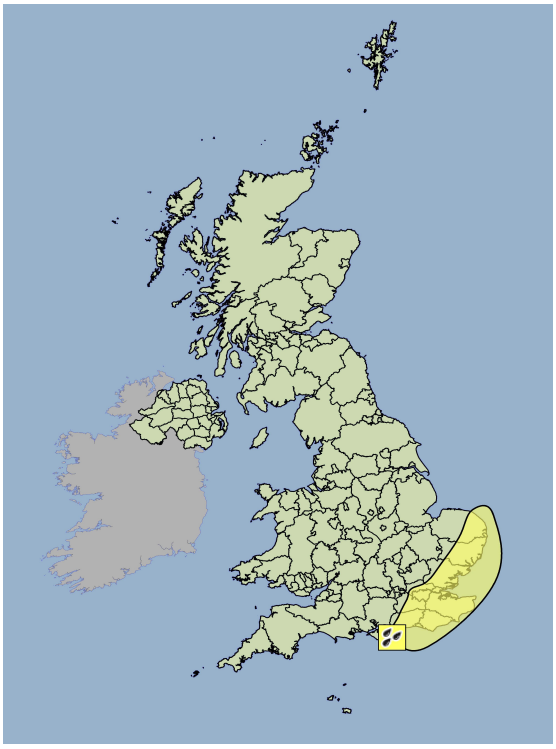
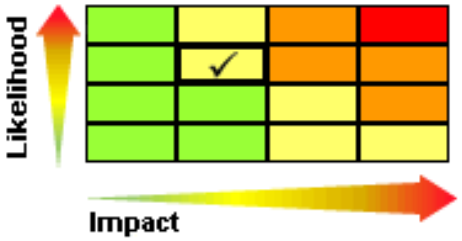
National Severe Weather Warning Service





Chief Forecasters Assessment
A waving cold front will continue to affect the southeast of the UK for much of today. It is likely to give a further 10-20 mm of rain in places before the system edges away southeastwards later today, taking the worst of the rain away with it. Given the wetter than average weather of late, these totals bring the risk of flooding in places.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:45 on Sun, 23rd Nov 2014** until **21:00 on Sun, 23rd Nov 2014**

Persistent and locally heavy rain will continue through much of today. With the rain falling on saturated ground, it may cause flooding in places before clearing away slowly eastwards later today. The public should be aware of this hazard.

This is a further update to the warning, to reduce the northwestward extent.
